'@-space' media chair

design Berhin & Beckman

About '@-space'

When you enter @-space, you enter the media. Be creative, play games, check your e-mail, relax or watch a movie! All the sound and computing power you need is aboard. You interact with a large screen in your own world of sound, still with full visual contact with the world outside. The sound quality inside @-space is astonishing, still very little sound finds its way to the surrounding.

@-space is delivered with an integrated 2.1 speaker system and integrated cables for computer, screen and keyboard. You plug your own laptop computer or game station, 19" touch sensitive flat screen (or flat screen + keyboard for private use).

For more images and further information, see www.beeb.se
